

EXPERIMENT - 10

AIM : Implement a SpringMVC based application to perform form validation and its use in JSP.

CODE

Student.java

```
package com.example;

import jakarta.validation.constraints.*;

public class Student {

    @NotBlank(message = "Name is required.")
    @Pattern(regexp = "^[a-zA-Z. ]+$", message = "Name must contain only letters, spaces and dots.")
    String studentName;

    @NotBlank(message = "Contact is required.")
    @Pattern(regexp = "^[6-9]\\d{9}$", message = "Contact number must be a valid 10-digit number starting with 6, 7, 8, or 9.")
    String studentContact;

    @Size(min = 1, message = "Please select at least one hobby.")
    String[] hobbies;

    @NotBlank(message = "Please select gender.")
    @Pattern(regexp = "^(Male|Female)$", message = "Please
```

```

select gender.")
    String studentGender;

    @NotNull(message = "Pincode is required.")
    @Min(value = 100000, message = "Invalid pincode")
    @Max(value = 999999, message = "Invalid pincode")
    Integer studentPincode;

    public Integer getStudentPincode() {
        return studentPincode;
    }

    public void setStudentPincode(Integer studentPincode) {
        this.studentPincode = studentPincode;
    }

    public String getStudentGender() {
        return studentGender;
    }

    public void setStudentGender(String studentGender) {
        this.studentGender = studentGender;
    }

    public String[] getHobbies() {
        return hobbies;
    }

    public void setHobbies(String[] hobbies) {
        this.hobbies = hobbies;
    }

    public String getStudentName() {
        return studentName;
    }

    public void setStudentName(String studentName) {
        this.studentName = studentName;
    }

```

```

    }

    public String getStudentContact() {
        return studentContact;
    }

    public void setStudentContact(String studentContact) {
        this.studentContact = studentContact;
    }
}

```

StudentController.java

```

package com.example.controller;

import com.example.Student;
import jakarta.validation.Valid;
import org.springframework.stereotype.Controller;
import org.springframework.validation.BindingResult;
import org.springframework.web.bind.annotation.ModelAttribute;
import org.springframework.web.bind.annotation.PostMapping;
import org.springframework.web.bind.annotation.RequestMapping;
import org.springframework.web.servlet.ModelAndView;

@Controller
public class StudentController {

    @RequestMapping("/registration")
    public ModelAndView registration(){
        Student student = new Student();
        student.setStudentName("Name");
        student.setStudentContact("0000000000");
        return new ModelAndView("student", "student", student);
    }
}

```

```

    @PostMapping("/addstudent")
    public ModelAndView addStudent(@Valid @ModelAttribute S
tudent student, BindingResult bindingResult)
    {
        if(bindingResult.hasErrors()){
            return new ModelAndView("student", "student", s
tudent);
        }

        ModelAndView mav = new ModelAndView("addstudent");
        mav.addObject("message", "Registered Successfull
y");
        mav.addObject("student", student);

        return mav;
    }
}

```

student.jsp

```

<%@ page contentType="text/html; charset=UTF-8" language="ja
va" %>
<%@ taglib prefix="form" uri="http://www.springframework.or
g/tags/form" %>
<html>
<head>
    <title>Student Registration</title>
</head>

</body>
</html>
```

OUTPUT

The screenshot shows a web browser window with the address bar displaying "localhost:8080/labvalidation_war_exploded/registration". The page title is "Student Registration". The form contains the following fields and controls:

- Name:
- Contact:
- Gender: Male: ☐ Female: ☐
- Hobbies: Cricket ☐ Football ☐ Badminton ☐
- Pincode:
-

Student Registration

Name:

Contact number must be a valid 10-digit number starting with 6, 7, 8, or 9.

Contact:

Please select gender.

Gender: Male: ☐ Female: ☐

Hobbies: Cricket ☐ Football ☐ Badminton ☐ Please select at least one hobby.

Pincode is required.

Pincode:

Student Registration
